FREDERIC REMINGTON

**VOL. XIII, NO. 5**

EDITOR'S ADDITIONS:

Please accept my apologies for the printing quality of this issue. Quite frankly, I am still learning the fine points of the fancy new equipment, and expect to have all the bugs eliminated before the next issue of LA POSTA. I'm deeply sorry that this issue does not meet anticipated standards. PLEASE ADD:

THOMAS M. MILLS MAIL AUCTION NO. 1 (page 11)

Estimates on the following lots: #53 -\$10; #56 -\$10; #60 -\$30; #71 -\$25; #72 -\$4; #75 -\$90; #76 -\$10; #79 -\$15; #84 -\$20; #86 -\$10; #88 -\$30; #89 -\$10; #93 -\$15; #103 -\$20; #104 -\$40; #105 -\$25; and #110 -\$25.

-----  
Post offices listed on Page 8 are, in order, LYONS, MILLERS, OAKVILLE, PEORIA, PLAINVIEW, ROCK CREEK, ROWLAND, SCIO and SHEDDS.  
-----

RICHARD W. HELBOCK MINI-MAIL AUCTION NO. 1 (page 15)

Estimates on the following lots: #62 -\$15; #63 -\$25; #66 -\$10; #70 -\$20; #74 -\$15; #75 -\$15; #105 -\$5; #107 -\$5; and #108 -\$15.

LA POSTA is published bi-monthly with six numbers per volume appearing in February, April, June, August, October and December. The purpose of the journal is to improve the opportunities for publication of research in Western Postal History. Advertising copy deadline is the 15th of each month preceding an issue date. An advertising rate schedule appears elsewhere in this issue. Information regarding subscriptions, back numbers and advertising is available from Editor, LA POSTA, P.O. Box 135, Lake Oswego, OR 97034.

## NINETEENTH CENTURY OREGON POSTMARKS: LINN COUNTY

By Charles A. Whittlesey

Linn County was created by an act of the Provisional Legislature dated December 28, 1847, from territory which had formerly been part of the Champoege District. The initial demarcation of the county encompassed a huge area stretching from the Willamette River to the crest of the Rocky Mountains, of course there were few non-Indian residents of the land lying between the Rockies and Cascades at the time. For practical purposes Linn County consisted then, as now, of the rich alluvial soils found in the roughly 25 miles east from Willamette River, and the transportation corridor of North Fork Santiam River. Those were the areas most favored by settlers, and that is where the county's towns and villages were founded.

Linn County proved a popular place of settlement in early Oregon. Its fertile valley land attracted numerous farm residents, and by 1860 the county population stood at 6,763, second only to Marion County and far ahead of Lane and Multnomah counties. The county's pioneer settlements were still quite small in 1860, additional testimony to its popularity as farm country. Albany, the largest, had but 344 residents, and the only other settlements returned separately by the census were Lebanon with 94, Brownsville with 89 and Harrisburgh with 65.

Linn County remained among the state's most populous throughout the 19th century, but it had been surpassed by Multnomah in 1870 and was eventually passed by Lane in 1900. Today Linn County ranks eighth among Oregon counties with a 1980 population of 87,743. While nearly one-third of that number lives in Albany, the county still boasts a viable rural population and has several active small towns and villages.

Albany, the county seat, was first platted in 1848. Growth was slow initially, but, the arrival of a river steamer upriver from Oregon City in 1852, insured the community's role as a distribution center throughout the steamboat era. The first railroad to reach Albany arrived in December 1870. Recognizing the importance of being on the line, the City of Albany paid the railroad some \$50,000 to compensate for the deviation in alignment necessary to lay track into town. It proved a wise

investment, insuring the continuing success of Albany as the county's principal transportation hub and distribution center. The Willamette Valley is dotted with the sites of long deserted river ports which failed to make the transition to rail towns because they were by-passed. Albany's timely investment avoided their peril.

Harrisburg, located on the east bank of the Willamette in the southwest corner of the county, was initially settled in 1847. In 1853 the McCully brothers opened a general store in the area. That same year, a post office named Thurston was authorized to serve the community with Gamaliel Parrish as Postmaster. In 1855 David McCully was appointed Postmaster of a second post office. This office was named for the city in Pennsylvania, and about a year later the Thurston post office was discontinued.

The early growth of Harrisburg was slow, but arrival of the railroad in 1871 provided a boost to the community. The Census of 1880 listed 422 residents, and that number has increased gradually over the years to reach the 1980 total of 1,882.

Brownsville, originally known as Calapooya, is another Linn County town which predated the Oregon & California Railroad. Situated at the place where Calapooya River enters the Willamette Valley, the community was named for Hugh L. Brown, who started the first general store. In 1980 Brownsville had a population of 1,262.

Lebanon is situated near the border between Albany Prairie and the timbered lands along South Santiam River. The district was first called Kees' Precinct, and the first post office was known as Washington Butte. Transportation to Albany in the early days was greatly enhanced by construction of the Albany & Santiam Canal in 1872. The ditch tapped South Santiam River near Lebanon, and flowed 12 miles northwest to the south side of Albany. It proved a cheap and efficient way to move grain to Albany.

The population of Lebanon in 1880 was only 270, but 10 years later that number had grown to 829, ranking the community second only to Albany in size. Construction of the Albany & Lebanon Railroad in the early 1880's was largely responsible for this development. The Oregon & California Railroad Company built the spur mainly to discourage narrow gauge competition in the area, but it proved a real boon to Lebanon, boosting that community into the role of Linn County's second city;

a role it still holds today. In 1980 the population of Lebanon was 10,415.

Scio, situated some 13 miles northeast of Albany on Thomas Creek, was begun about 1856. The locality had previously been served by Santyam Forks post office, but establishment of the Scio office came in 1860. A flour mill gave much of the early impetus for growth, but the community has remained small with its population of 193 in 1880 increasing to only 588 in 1980.

Halsey, Shedd and Tangent were three Linn County communities founded in conjunction with the Oregon & California Railroad. Halsey, the largest, was named for William L. Halsey, a Vice-President of the railroad. The population of Halsey was 306 in 1880. It had grown slowly to a total of 686 in 1980.

Shedd, or Shedd's as the post office was first named, was a community which moved to the railroad from an earlier site a bit over a mile to the east. The earlier community, begun in the 1860's was known as Boston Mills.

Tangent was so named because the site is along a tangent of straight track over 20 miles in length through Linn County. In the late 1870's, Tangent consisted of about 35 persons with one store, a blacksmith shop, and grain warehouses. In 1980 the population was 478.

Soda Springs and Sodaville post offices both served the resort community located some 5 miles south of Lebanon. The place was a popular summer resort as early as 1870, and a report in 1878 stated that during the summer "the neighboring hill was dotted with numerous tents of visitors, who come from all sides to enjoy the soda and social intercourse."

Peoria, and its forerunner Burlington, were small villages on the east bank of Willamette River. Steamboats were able to reach Peoria during high water, but construction of the railroad and the founding of Halsey began a slow process of decline for the riverport.

Numerous other small villages have dotted the rich Linn County landscape. Some, such as Crawfordsville, Sweet Home and Crabtree, have managed to retain their postal identity over the years. Many others have not.

The North Santiam River forms a transportation corridor into the Cascades which has spawned a number of communities in both Marion and Linn counties. During the 1890's, Colonel Thomas E. Hogg extended the Oregon Pacific Railroad east from Albany, up North Santiam River to Detroit. The original goal was to cross the Cascades and make a connection with one of the eastern lines, thus completing a trans-continental railroad through Albany to Yaquina Bay, but after 142 miles of track financial problems halted construction. Shelburn, Kingston and Lyons were Linn County communities brought to life by the building of this line.

Nineteenth century postmarks have been documented from 32 different Linn County post offices. Naturally, Albany has the largest number of varieties recorded at 15. Ten varieties are known from Harrisburg, nine from Lebanon, and eight each from Brownsville, Scio and Tangent. There are seven 19th century postmark types recorded from both Halsey and Crawfordsville, and six each from Peoria and Shedd. Thus far, 115 different 19th century postmarks have been documented from Linn County offices; a worthwhile challenge for the collector of postal history from this beautiful rural Willamette Valley county.

NOTES: (1) Often redated a few days later in mss., probably the date the mail left the PO.  
(2) Two examples have hour of day instead of year.  
(3) Appears to be Type 8 used with no year slug.  
(4) One example has "H.H. Spalding/FREE."  
(5) Post Office name spelled "SHEDDS."  
(6) Post Office name spelled "TENGANT" in error.

Color Abbreviations: b - blue or bluish  
g - green  
p - purple  
pk - pink  
v - violet or red violet

# THOMAS M. MILLS

BIDS CLOSE: NOVEMBER 30, 1982

## THE POST OFFICES OF UTAH

By Dan Meschter with Arthur E. Rupert

### PART XIII: Iron County

Iron County originally was erected as Little Salt Lake County by the General Assembly of the State of Deseret in January 1850. Unlike the other six original counties that clustered around the Great Salt Lake, Little Salt Lake County was far to the south, and it would be another year before any real colonization would take place there.

The history of Iron County began with an expedition under the leadership of the well-known Mormon Apostle, Parley Pratt, during the winter of 1849-50, to explore around Little Salt Lake. The area, however, was far from unknown. It was near here that Fremont's 1844 route north to Lake Utah left the Old Spanish Trail from Santa Fe to Los Angeles. Mormon traders also had followed the route as early as 1847 on their way to southern California to buy horses and mules.

Whether his party should be credited with the original discovery or not is unclear, but Pratt was able to report that the mountains both around Little Salt Lake and west of the Cedar Valley contained significant deposits of high quality iron ore. No report could have been better received. The Assembly promptly changed the name of the county to Iron, and church leaders began preparations to develop an iron industry.

A settlement was established at the mouth of Center Creek in January 1851 for this specific purpose. The population had risen to 360 soon after the Centre Creek post office was established in March. Later that year, another settlement was established at Cedar City for the same purpose, and the name of Centre Creek was changed to Parowan.

The area had an abundance of wood allowing the preparation of charcoal. Coal suitable for coking was discovered in the hills nearby, and the future of a local iron industry appeared rosy. In fact, furnaces were built and some pig iron was produced, but costs were high and technical obstacles proved insurmountable. The effort at Parowan and Cedar City was abandoned around 1857. The Great Western Iron Mining Company continued in operation at Iron City through the 1870's, building furnaces and a rolling mill. It was to be over

half a century before the major deposits were brought into production, and then only as a source of ore.

Despite the failure of the local iron industry, traffic increased on the California Road via Paragonah, Summit, Joel Johnson's "Fort", Samuel Hamilton's "Fort" (Pine Valley), and Kanarrville toward Saint George to the south. Where industry failed, the settlers could and did turn to stock raising and agriculture.

One of the obvious problems with iron ore production was the lack of bulk transportation facilities. The nearest railhead after 1880 was the Utah Central (formerly the Utah Southern) at Milford in Beaver County. Finally, just before the turn of the century, the Utah & Pacific Railroad Company was organized to extend this line to Los Angeles. The most feasible route led south from Milford and southwest across Iron County into Nevada. Lund, Modena and the rescinded post office at Uvada probably served railroad towns that "stuck". They were joined in later years by Sahara, Beryl, Yale and Heist as local stations. Sulfur was probably a predecessor of Lund.

In 1922 Columbia Steel, a subsidiary of United States Steel, took over the long abandoned mines west of Cedar City. The company built a rail spur from Lund to Cedar City and on to the mines near the site of Iron City via Iron Springs. The iron ore was at last mined in quantity, only this time it was shipped to a plant near Provo.

A total of 31 post office names are listed for Iron County. The list includes two that did not operate: Uvada and Zane. There were five name changes, not including Zane. As of late 1979, only nine postal units continued to operate, and 5 of those were CPOs, including the Brian Head CPO which serves a ski resort.

## NOTICE TO ALL ALASKA COLLECTOR CLUB MEMBERS:

LA POSTA has been authorized by one of the Directors of the ACC to resume publication of THE ALASKAN PHILATELIST. Such publication would initially be 'piggy backed' with the normal issues of LA POSTA, and would consist of at least 4 pages of Alaska news and information per issue. If, after a few issues, support is adequate, THE ALASKAN PHILATELIST might then resume publication as an independent journal.

This issue of LA POSTA has been mailed to all ACC members on the most recent membership list. If you approve of this plan to revitalize the club, please write me, Richard W. Helbock, here at LA POSTA. If, on the other hand, someone has a better idea, then let's hear about it. Our main interest is to see the ACC and TAP alive and well once more.

LA POSTA, P.O. Box 135, Lake Oswego, OR 97034.

# Richard W. Helbock Mini-Mail Auction No.1

## ALASKA

1. CHISNA, Aug 4, 1906, on cvr w/#319. Exc PM, VF cvr., b/s Portland, Rare PO (1901-08). Est. \$150.
2. CHOMLY, Sep 2, 1912 on PPC, Type 1, lt. but readable PM. Tough PO (1900-30). Est. \$40.
3. COLDFOOT, Jul 10, 1909. Exc. PM on Reg. Rct. Rare Arctic PG. Est. \$75.
4. HAINES, Jun 17, 1912 on PPC, Ty 3, VF PM. Est. \$10.
5. JUNEAU, Ty 10 (1916) & Ty 15 (1924) on PPCs. Est. \$5.
6. KENNECOTT, Ty 2 (1935), Fine PM on air cvr. Est. \$8.
7. CUTOFF & KANATAK (Ty 3), Exc. PMs on #10 env. E. \$5.
8. CHICKEN (1940) & STONY RIVER (1951) on air cvrs. E. \$5.
9. Lot of 10 DPOs on piece, inc. LAWING, LONG, LASSEN, KAKO LANDING, LAKEVIEW, KNIK & GYPSUM. Est. \$10.
10. Lot of about 40 Terr. POs on piece, many DPOs. E. \$10.

## ARIZONA

11. COPPER CREEK, Mar 22, 1912, VF PM on PPC of mine. E. \$25
12. CHIN LEE, Jul 18, 1921, VF PM on PPC. E. \$15.

## TIPS ON TECHNIQUES TRACING POSTMARKS

By Richard W. Helbock

Preparation of an accurate tracing of a postmark can be a useful addition to either the write-up and mounting of a postal history collection or a research article. Experience gained over the past 15 years has taught me a few tricks which might be useful to a person wishing to master this skill. No claim is made that this is the best technique for tracing postmarks. It is simply the method that works best for me.

### TOOLS AND MATERIALS

There are five basic materials or tools required to render accurate postmark tracings: pencil, pen and ink, tracing paper, a compass and a straight edge ruled in millimeters. I prefer a 4H pencil sharpened to a very fine point. This hard lead makes a very thin light line, which is difficult to smudge and will not leave an unsightly residue of graphite when you ink over it. One may purchase a mechanical engineering pencil with 4H lead inserts, but I find a simple wooden pencil does the job nicely for a cost of about 15 cents. These wear very slowly, and, if you are able to use it down to a nubbin before it becomes misplaced, you are much better organized than I.

My preference for a pen is a bit more extravagant. After trying numerous alternatives, I long ago decided to stick with a Rapidograph. This is a finely engineered German pen sold at most graphic arts supply stores. The pen points come in a wide range of sizes ranging from the ultra fine 4-ought (0000) up to a thick line producing 4 or 5. It is not necessary to buy a wide variety of pen points. Three are quite sufficient for most needs (a 4-ought, a 2-ought, and a 2), and one can get by rather well with just a 2-ought (00). The pen point consists of a metal shaft which fits into a barrel and controls the flow of ink. The larger the shaft and barrel diameter, the thicker the line produced. Ink is stored in a small plastic reservoir which fits over the end of the barrel. It is easily filled and feeds into the barrel by gravity flow. The ink flow is exceedingly even, and pen cleaning is a simple, but important, matter once the work is done. A complete Rapidograph pen presently costs between \$7 and \$10, and additional interchangeable points run about \$5. These are finely built

drafting tools, and with proper care will last forever. In recent years a number of drafting pens of similar design have appeared. I have tried only a few of these, and, while their price was a bit lower, their performance was inferior to Rapidograph.

Use Pelican or one of the other high quality inks with your pen. My experience has been that the brand of ink is not too important, as long as it is an ink intended for drafting. Much more important is the fact that regardless of the ink it is necessary to thoroughly clean the pen after each using.

The selection of a proper tracing paper is a matter of some importance. I prefer a 100% rag smooth surface paper such as Albanene by K & E. There are a number of different papers of good quality on the market, and perhaps one should experiment a little to find the one that best suits. You want a paper which accepts the ink in a nice even line, and permits enough transparency for ease of working. For a time I even experimented with mylar film. It works very well as a tracing medium, but is not quite as adaptable as paper for all applications one might wish to make of one's tracings.

A straight edge ruled in millimeters is necessary to measure the diameter of postmarks, as well as an aide in drawing straight lines. It may be made of either plastic or metal. I prefer a transparent plastic so that I may see through the rule. Metal is probably more durable as a straight edge, but I consider the ability to see through the rule a worthwhile trade-off.

I recommend the purchase of a well engineered drafting compass. One could make do with an inexpensive "school box" compass, but, since most postmarks are circular, this is a tool which you will rely on heavily to produce accurate postmark outlines. It is only necessary to acquire an inking compass. I do not make a pencil drawing of the postmark outline, and believe such a practice to be a waste of time.

The total price of the tools and materials described above should be about \$20 if you have followed my recommendations. These materials are of such a general nature that most may be used for a variety of other graphic activities such as the making of charts, graphs and maps. The investment is therefore a small, but necessary, venture in order to produce postmark tracings of which you may be proud.

## PRELIMINARY LAYOUT

A certain amount of planning must precede the actual tracing of postmarks. For this reason, I always try to schedule my tracing activities in batches of 5, 10 or 20 postmarks at a time, rather than a single postmark. Some of the things that must be done are constant regardless of whether you are tracing one postmark or a dozen. It is more efficient, therefore, to work on a batch rather than just one.

After assembling tracing paper, pencil, ruler, and compass, I am ready to take the first step in layout. That step is measurement. Very carefully I measure the diameter of each circular postmark I wish to trace, and note the diameter on a piece of scratch paper. Postmarks tend to vary from about 20 millimeters in diameter for machine cancellations up to 35 mm. or so for the 4-bars and older styles. They also tend to cluster around some popular diameters such as 28mm., 30mm., and 32mm. Lets say I was interested in tracing 10 postmarks. They measured as follows: 1 was 27mm., 3 were 28mm., 2 were 29mm., 3 were 30mm. and 1 was 32mm. My scratch paper notes would tell me that I needed 5 different sized circles.

Portland, OR 97204 (503)220-0293

HOURS: Monday-Friday, 10:00AM-5:30PM

Using my ruled straight edge, I layout on scratch paper five radii, or half-diameters, of required dimensions: 13.5mm., 14mm., 14.5mm., 15mm. and 16mm. A ruled pad works well for scratch paper because it is easy to make tick marks on the ruled lines to note the desired radial distances. If I am working on a large batch of tracings, I sometimes make an additional pencil note indicating the desired number of circles next to each radial distance.

Now it is time to draw the circular outlines. I preset my compass for the first radial dimension (13.5mm.) by simply matching its opening to the proper tick marks on the scratch paper. Then I fill the ink reservoir of the compass pen, and scribe a circle of 27mm. on a sheet of tracing paper. Often I will draw a couple extra circles of the same diameter. These may useful in case a tracing goes badly, or I find another postmark was improperly measured. When I have enough circles of 27mm., I reset the compass opening using the next set of tick marks and draw a group of 28mm. circles. The whole procedure goes quite quickly with a little practice, and I can usually draw 20-25 circles with just one filling of the compass ink reservoir.

Not all circular postmark outlines are of the same line thickness. If I am about to trace a batch of postmarks in which line thickness varies considerably, I will make additional scratch paper notes indicating radial dimensions requiring particularly fat or thin lined circles. Similarly, if there are double circle postmarks in the group, my notes will indicate the radial dimensions which must be made concentric. This preliminary layout procedure may at first appear unduly complicated, but with practice it is quite simple and takes but a short time. In my opinion, the time is well spent, for it forces one to plan the job before diving into it, and will usually avoid the necessity of going back to draw new circles in the middle of tracing.

## THE PENCIL TRACING

The preliminary layout has provided me with a detailed knowledge of the batch of postmarks I wish to trace and a set of inked circles which match their diameters. After allowing a few minutes for the ink to dry, I am ready to begin the first pencil tracing.

I wish to emphasize again that my preference is for a very sharp point on the 4H pencil. A good pencil sharpener

can achieve this, but I often hone the point even more using coarse paper. The postmarks we wish to trace are, of course, fragile and valuable artifacts. It is necessary to exercise extreme caution when undertaking a tracing to insure that we do not mark or in any way damage the original postmark. A finely pointed pencil will allow one to draw a very light thin line, which may then be inked after the original postmark is safely put away.

Placing the tracing paper over the postmark, I match the inked circle with the outline of the postmark. It is not necessary to tape the tracing paper down. A tracing takes but a few minutes, and should the paper become jarred or misregistered, it is a simple matter to reregister it using the circular outline and whatever tracing has been done. In making the tracing, I usually begin with the lettering at the top of the dial -- typically the town name. I then proceed to the state name at the bottom of the dial, and trace the date at the center of the dial last. There is certainly nothing magic in this ordering, and you may well find with a little practice that a different ordering works better for you.

A steady hand is obviously an important attribute in making the pencil tracing, although not nearly as important as in the later inking. If you find that it is very difficult to make an accurate pencil tracing of the postmarks letters, you might try this trick. Turn the postmark and tracing paper to a 90-degree angle from your body. You will now find all the letters lying on their backs. If the town name is for example, PORTLAND, note that tracings of all the letters except "O" may be started with a short straight line. Such lines should be quite easy to draw when the paper has been rotated 90-degrees, for they are simply a short left-to-right motion with your hand. The "A" and the "N" require only a slight variation in this motion. Once you have drawn all these straight lines, rotate the paper back 90 degrees to its original position. Now it should be much easier to finish off the rounded and perpendicular parts of the letters. This technique may be used for all lettering in the postmark. It goes very quickly, and I find it a useful expedient on those mornings when an extra cup of coffee has put too much snake in my hand.

Start simple. If you are tracing postmarks for the first time, begin with simple block lettering postmarks. Lettering with serifs can be passably

rendered in a tracing, but it requires more practice and should be worked toward rather than your first attempt. It is not necessary to make a perfect pencil tracing. In fact, a traced postmark rarely, if ever, duplicates the original exactly. What we are trying to do is to render an illustration which captures the essential design elements of the original. Letter spacing and size is therefore more important than the exact shape of the letters. With practice, your ability to achieve letter shapes more like the originals will improve.

## INKING

Pencil tracings of the entire batch of postmarks have now been completed. They are not perfect copies of the originals, but the letter spacing and general design elements are pretty good. After placing the original postmarks carefully out of the way, I am now ready to begin inking.

To ink postmark lettering, I always use a 2-ought (00), or finer, Rapidograph point. Even if the letters themselves are thicker, I find it better to use the fine pointed pen. It is always possible to achieve a thicker lettering style by making additional strokes with your fine point.

Lettering in ink requires a certain boldness. Do not be timid when you touch your pen point to the pencil tracing. Know what it is you wish the ink to do, and remember if you make a mistake it is not that hard to begin again. I use and recommend the 90 degree rotation technique described earlier for all inking. It handles all straight-line letters quite well, and leaves only the "O's" and "C's" and "S's", plus a few others, to be mastered through practice.

Once a postmark tracing has been inked, be sure to allow adequate drying time before attempting any touch up work with an eraser, Exacto knife or other emergency repair tool. In fact, unless the repair is very minor, a more satisfactory result will probably accrue from doing the tracing over from the beginning. Keep in mind the fact that your inked tracing is unlikely to look just like the original. It should look similar to the original in style, size and spacing of letters, and it should have the same design pattern. If you have achieved these characteristics in your tracing, you can be proud of your work.

## FINAL COMMENTS

Preparing postmark tracings can be quite a lot of fun in addition to yielding products which are useful in research or collection mounting. It is an intense activity which should be undertaken with the very best lighting conditions, and only for two to three hours at a time. If I am working on a batch of tracings, I will frequently execute all the pencil work in one session, and then return at a later time to do the inking.

It requires practice to make an accurate, well-rendered postmark tracing. The techniques I have described in this article work well for me, and should be of assistance to you. Experiment as you practice, and you may encounter preferable procedures and better tools. A postmark tracing is a little art, and even those of us who practice little arts may differ in our preferred methods.

## LA POSTA ADVERTISING RATE SCHEDULE

|  |          |
|--|----------|

## THE POST OFFICES OF SOUTHEASTERN ALASKA

By Richard W. Helbock

Southeastern Alaska is a land of densely forested islands and irregular mainland stretching 400 miles along the coast of North America. The islands, collectively known as the Alexander Archipelago, range from the nearly 4,000 square mile Prince of Wales down to tiny islets. Baranof, Chichagof, Admiralty, Kupreanof and Revillagigedo are among the larger islands in addition to Prince of Wales.

Today most of Southeastern Alaska, or the Panhandle as it is sometimes called, lies within the boundaries of the gigantic Tongass National Forest. To the casual observer this land appears to be a nearly endless wilderness of lush green firs, spruce, pines and hemlock mixed with alders and various other hardwoods. It looks every bit of a frontier, with the implication that its time for human endeavor lies in the future. Ketchikan, Sitka, Wrangell, Petersburg and even Juneau appear to be small communities perched on the edge of wilderness. Everywhere else the impacts of man are scarcely visible among the dense rainforest vegetation. Even highways, that most ubiquitous of modern man's impacts on the physical world, are limited to tiny strips in and around a few of the larger towns and cities. All of this visual evidence masks the fact that southeastern Alaska has already enjoyed a long, rich and sometimes raucous history during its American era. Before that, of course, it was under Russian domination, and even before that it was home to the Tlingit, Haida and other Indian peoples of the region. Since our interest is postal history, and since no official system of posts is known to have existed before 1867, our interest in the history of southeastern Alaska will be limited to the American period.

Specifically, this article will present a brief historic sketch of each of the more than 120 post offices, branches and stations known to have operated in southeast Alaska from 1867 to date. These offices have served communities whose purposes have included military posts, logging, fishing, mining, recreational and governmental functions. Most have been discontinued; only 23 independent post offices remain active in the region. Many were quite short-lived, and present the collector of Alaskan postal history with a serious challenge in his or her attempt to

find examples of their postal markings. A map provides additional locational information, and, when combined with the text that follows, offers the student of Alaskan postal history the most complete record on post offices of the Panhandle published to date.

### ALASKINDIA

Estab. 29 Jun 1938. Converted to Winter PO: 5 Aug 1941. Dis. 30 Apr 1945. MT: Wrangell.

Served the Wrangell Institute, a school for Alaskan natives, situated just south of the town of Wrangell on Zimovia Strait. Alice M. Tassell, 1st PM.

### AMALGA

Estab. 29 Jul 1905. Dis. 31 Dec 1927. MT: Juneau.

Served the community at Eagle River Mine, about 4 miles northeast of the mouth of Eagle River and 22 miles northwest of Juneau. The mine, discovered in 1902, was in Thane Mountain, and the community was connected to Lynn Canal by a 7-mile horse tram which ran from the mine to Amalga Landing. The name was reported to have come from the word "amalgam," although another source suggests it was an acronym from the company name, "American Alloy of Georgia." James R. Whipple, 1st PM.

### ANGOON

Estab. 17 Nov 1930. Was Killisnoo.

The Census of 1880 reported a Tlingit village of "Augoon" here on the west coast of Admiralty Island with a population of 420. Shortly thereafter, the village was nearly abandoned as its people moved two miles south to the site of a new fish reducing plant at Killisnoo. In late 1928, with the closure of the Killisnoo plant, the post office returned to Angoon, but a name change to that effect did not occur until 1930. Census figures for that period reflect these economic changes. In 1920 Angoon had but 114 residents. Ten years later its population stood at 319. Vincent Soboloff, 1st PM.

### ANNETTE

Estab. 16 Jul 1947.

Annette Island was named in 1879 by W.H. Dall of the USC&GS for his wife, Annette Whitney Dahl. The island, which lies just south of Ketchikan, was set

aside in 1891 as a reserve for Tsimshian Indians. In 1940 the US Army selected a site on the island for an airfield, one of a series of such linking Alaska with the Lower 48. Postal service was initially provided by ANNETTE ISLAND LANDING FIELD BRANCH of Ketchikan, but this unit was replaced in May 1942 by APO 935. After the war the airfield was transferred to the CAA, and this civil post office was established to provide local service. The village, located about a mile northeast of the airport, has a population of about 300. Ruth Clare Hutchins, 1st PM.

#### AUKE BAY

Estab. 23 Dec 1946.

Located on Auke Bay, about 11 miles north of Juneau. This community was settled about 1918 when Glacier Hwy. was built north from Juneau. Although unincorporated, the current population exceeds 500, and the community functions as a suburb of Juneau. The name comes from the Tlingit word, "Akiu", meaning "little lake." James V. Hickey, 1st PM.

#### BALDWIN

Estab. 3 Oct 1905. Dis. 31 Oct 1907. MT: Ketchikan.

Served a mining camp on the north shore of North Arm Moira Sound, Prince of Wales Island, about 40 miles southwest of Ketchikan. Although details are lacking, the community was apparently named for a local prospector. Robert Rea, 1st PM.

#### BARANOF(F)

Estab. 30 Apr 1907 as BARANOFF. Dis. 30 Jun 1912. MT: Chatham. Re-estab. 6 Mar 1917. Style changed to BARANOF: 1 Dec 1930. Dis. 2 Feb 1973.

Located at the head of Warm Springs Bay on the east coast of Baranof Island, 19 miles east of Sitka. The community was named for the island, which was in turn named for Alexander Baranov, first governor of Russian America. A mineral hot springs resort has provided much of the basis of the local economy. Guy C. Wing, 1st PM.

#### BARGE

Estab. 1 Feb 1950. Was Hood Bay. Dis. 7 Jun 1951. MT: Angoon. This office was descriptively named. Throughout its brief existence, the

office was located on a former US Navy quarter barge which operated as a mobile logging camp in southeast Alaskan waters. Fern Owens, the 1st and only Barge PM, wrote in 1950 that the name was selected to avoid identification with any particular location.

#### BAYVIEW

Estab. 28 Aug 1917. Dis. 1 Oct 1924. MT: Klawock.

A descriptively named post office which operated at Klawock, a cannery on the west coast of Prince of Wales Island, about 5 miles north of Craig. The Klawock office continued to operate until 1923, and for the 1917-23 period the community had two post offices. In late 1923 Klawock was closed out to Bayview, and the following year the name of Bayview was changed to Klawock. Charles E. Hibbs, 1st PM.

#### BEAUCLAIR

Estab. 20 Jun 1912. Dis. 30 Jun 1915. MT: Shakan.

Served a small fishing village on Kuiu Island, 28 miles northwest of Shakan across Sumner Strait. The name was first applied by Capt. Vancouver to the harbor in 1793. Lewis P. Hunt, 1st and only PM.

#### BELL ISLAND

Estab. 29 Jul 1932. Dis. 30 Sep 1954. MT: Ketchikan.

Served the hot springs resort on Bell Island in Behm Canal, near the northern end of Revillagigedo Island. The resort, founded by George Roe in 1902, continues to operate as Bell Island Hot Springs, and is a popular recreation center. Anna M. Herrington, 1st PM.

#### BERNERS

Estab. 19 Mar 1890. Dis. 22 Dec 1892.

John McLaughlin was appointed 1st PM of this office located on the west coast of Berners Bay, about 8 miles north of Amalga. There is some question as to whether the office actually operated as it is not listed among Alaska's post offices in the 1891 OFFICIAL REGISTER. The first stampmill was erected here in 1890 to serve the mines around Juneau.

#### BRIDGEPORT

Estab. 30 Apr 1923. Dis. 31 May 1925. MT: Hyder.

Served a short-lived mining camp on Portland Canal about 10 miles north of

Hyder. While listed in the 1923 OFFICIAL POSTAL GUIDE, the office is reported to have actually closed on 1 Sep 1923, after less than 6 months of operation. Henry Hummel, 1st and only PM.

#### CALDER

Estab. 9 Nov 1906. Dis. 31 Aug 1918.  
MT: Shakan.

Served a marble quarry located at the mouth of Marble Creek, east shore of Shakan Bay, on the northwest coast of Prince of Wales Island. The deposit, discovered in 1896, was worked by the Alaska Marble Company beginning in 1904. Mount Calder, located 6 miles to the northwest, was the feature for which the office was named. John McCallum, 1st and only PM.

#### CANYON

Estab. 18 May 1898. Dis. 18 Nov 1898.  
MT: Dyea.

This post office operated at the tent camp known as "Canyon City" on Taiya River, about 9 miles north of Dyea on the trail to Chilkoot Pass. During the peak of the Klondike Rush, Canyon City reportedly housed some 3,000 temporary residents. Kenneth Murray, 1st PM.

#### CAPE FANSHAW

Estab. 9 Jun 1902. Dis. 31 Jul 1903.  
MT: Petersburg. Re-estab. 13 Jan 1921.  
Dis. 2 May 1932. NCT: Fanshaw.

A fishing village and one-time cannery town located at the southern tip of Whitney Island, 71 miles east of Sitka. Named for the geographic feature 3 miles to the southwest. The cannery was built about 1901. Herman G. Halkett, 1st PM.

#### CAPE POLE

Estab. 1 Nov 1949. Dis. 15 Oct 1953.  
MT: Ketchikan.

Served a logging camp on the east shore of Fishermans Harbor, southeast coast of Kosciusko Island. The community drew its name from the nearby cape, which was named by Capt. Vancouver in 1793 for Captain Pole of the Royal Navy. At its peak, Cape Pole had a population of about 100. Don Chester Seeman, 1st PM.

#### CHATHAM

Estab. 27 Jan 1906. Dis. 3 Jan 1964.  
MT: Juneau. Re-estab. 1 Jun 1964 as RS of Juneau operating 1 Jun-15 Sep only.  
Dis. 30 Nov 1967.

Served a cannery village located on the

west shore of Sitkoh Bay, Chichagof Island, 22 miles southeast of Tenakee Springs. The cannery was built in 1905, but operated only during the summer fishing season. A large influx of workers occurred each canning season, but the permanent population usually varied between 5 and 10 residents. George T. Myers, 1st PM.

#### CHICAN

Estab. 2 Feb 1882. Dis. 20 Jul 1882.  
NCT: Roberts.

This was the first post office to serve the sawmill community later known as Shakan. Located on the northwest coast of Kosciusko Island, at the head of Shakan Bay about 60 miles north of Klawock, the mill was built in 1879 by Oliver Fountain. A tribe of Tlingit Indians maintained a summer village here, and this post office was named for their chief. Ira B. Sprague, 1st PM.

#### CHICHAGOF

Estab. 20 Aug 1909. Dis. 3 May 1957.  
MT: Juneau.

This office served a mining community located at the head of Klag Bay on the west coast of Chichagof Island. The island, and eventually the post office, was named in 1805 for the Russian Admiral Vasili Yakov Chichagov. A mining camp was established in 1905 with the discovery of gold at Klag Bay. The Census of 1920 first reported Chichagof village with a population of 172, but by 1930 the population had declined to just 69. The quartz mine continued to operate until the late 1950's, but the year-round population had declined to less than 10 by the time the office closed. Clara D. Eichler, 1st PM.

#### CHILKAT

Estab. 5 Mar 1890. Dis. 23 Oct 1899.  
MT: Haines.

Served a cannery town and trading station at the mouth of Chilkat River, about 2 miles south of the center of Haines. The cannery was built in 1884, and was for a time the largest in southeast Alaska. Haines post office had operated from 1882-85 at nearby Willard (Haines) Mission, but the larger community was then known as "Chilkoot." Haines post office was re-opened in 1898, and Chilkat post office closed shortly thereafter. Frank H. Poindexter, 1st PM.

## CHOMLEY

Estab. 23 Jun 1930. Dis. 30 Sep 1930.  
MT: Ketchikan.  
Served a cannery settlement located on the south shore of West Arm Chomondeley Sound on Prince of Wales Island. The postal facility was named for the Sound, and that body of water was named by Capt. Vancouver for Hugh, Earl of Chomondeley. Lenore S. Millar, 1st PM.

## COBOL

Estab. 1 May 1947. Dis. 9 Sep 1954. MT: Chichagof.  
Served a mining community on the north shore of Slocum Arm, southwest coast of Chichagof Island, about 14 miles southeast of Chichagof. Gold was discovered on nearby Mine Mountain in 1921, and the community name was formed by a composite of Cox and Boylan, the two mining partners. During the time the office was in service there was a permanent population of less than 10, but the summer season brought an influx of workers. Martha E. Marholec, 1st PM.

## COMET

Estab. 9 Sep 1901. Rescinded: 5 Jul 1902. Estab. 5 Feb 1937. Dis. 28 Feb 1938. MT: Juneau.  
Served a mining camp on the west shore of Lynn Canal, 47 miles northwest of Juneau. The early attempt to establish a post office here with Fred Haumila as Postmaster was unsuccessful, so Edward M. Hendrickson received the honor of being 1st PM some 36 years later.

## COMPLEX

Estab. 6 Apr 1917. Dis. 31 Mar 1919.  
MT: Ketchikan.  
A mining camp located 18 miles south of Dolomi and 20 miles southwest of Metlakatla on Kendrick Bay, Prince of Wales Island. Emma Nelson, 1st PM.

## COPPERMOUNT

Estab. 3 Jul 1900. Dis. 15 Feb 1907.  
MT: Sulzer.  
Served a mining community at the head of Copper Harbor on the southwest coast of Prince of Wales Island. The Alaska Copper Company built the first smelter in Alaska here, and conducted mining operations on the mountain above the settlement. Ernest O. Sylvester, 1st PM.

## CRAIG

Estab. 5 Jun 1912.  
This community is located 60 miles northwest of Ketchikan on Prince of Wales Island, at the southern end of Klawock Inlet. It was named for Craig Millar, one of three partners who started the first cannery here. The population of Craig remained stable at about 300 during the pre-war period and into the post war years as well, but a number of recent arrivals has swelled the 1980 population to 522. Frank West Thompson, 1st PM.

## EDITOR'S COMMENTS

To all of you reading LA POSTA for the first time, WELCOME. We hope you enjoy our publication and decide to become LA POSTA subscribers. To our old friends, GREETINGS from the green hills of Oregon. We hope you approve of the changes in our journal.

The opening of our pages to advertising reflects a desire to make LA POSTA a source of postal history material as well as a repository of research. It is often difficult to find inexpensive items for one's collection, and it is hoped that our one-page auctions will help fill that need.

The Tips on Techniques article appearing in this issue is intended as a first effort in a series of 'How to' articles dealing with various aspects of postal history collecting and research. Those of you with specialized knowledge of some aspect of research or presentation are urgently requested to share your expertise through our pages. Such a series is long overdue.

LA POSTA also wishes to carry news of local postal history activities. For example, the Portland area postal history group has begun its monthly meetings. For information on the site and time of the next meeting, call Chuck Whittlesey (503) 777-1337. How about it you folks in Denver, Tucson, Anchorage, Seattle, Los Angeles, San Francisco and Black Hawk? Whats going on locally?

Richard W. Helbock, Editor, P.O. Box 135, Lake Oswego, OR 97034. Phone (503) 246-5246.
